

PartKeeper

CAD administrator tool for simple metadata management

This administrator tool enables properties, categories and characteristics of CAD files to be edited and added quickly, clearly and easily.

PartKeeper reads the properties of selected Solid Edge, Inventor and SOLIDWORKS files and displays them clearly in an Excel table. In conjunction with PDM Studio, properties of any managed documents can also be edited. This information can then be used, for. B. can be used for bills of materials or in ERP systems.

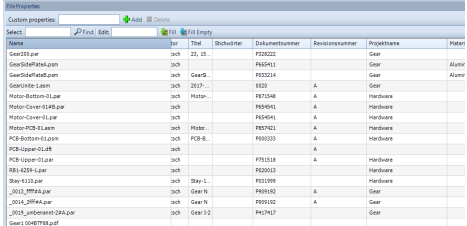

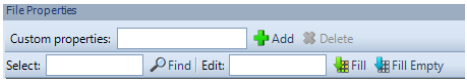

In addition, PartKeeper can also provide components with information that is necessary for use with Solid Edge complete fittings or plant design.

Your benefits

- Find, call up and change document information flexibly
- Batch processing of properties via Excel export and import
- Time savings in metadata management
- Reduction of manual errors

Available for Solid Edge, SOLIDWORKS, Inventor and PDM Studio

Function overview

Function	Result & benefits
Reading in all meta properties of individual files or entire directories	Quick overview of all available metadata in tabular form 
Adding more data fields	Easy addition of information for single or multiple files at the same time 
Processing in Excel	The data can be exported to Excel. Extensive processing options are available there in order to transfer large amounts of data quickly and easily edit, add to or optimize them, e.g.: <ul style="list-style-type: none"> ■ Copying data column by column to unify the information ■ Acquisition of data from other sources ■ Splitting information (e.g. from the file name) into separate columns
EClassification in and change of categories <i>Only in connection with PDM Studio or PartsManagement</i>	Quick overview of standard, purchased and factory standard parts. Your own characteristics help you to reuse what you already have existing components, lower the number of parts and reduce hence the cost.
